
Ada Fundamentals - Lab 3 - Statements

AdaCore

The purpose of this lab is to understand the various statements, and how they can be used to make the code more terse.

Hints

- The **delay** keyword is a way to make to program stop for a given time. It takes no parentheseses for its first argument.
- Try to see how each construct has strengths and weaknesses and how to make good use of those.

Questions

- The code should compile immediately
- Follow the instruction in the source file
